DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed June 26, 2006 has been entered. Claims 57-112 are pending in the instant application.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. William Kircher on August 25, 2006.

The application has been amended as follows:

- in claim 111:

- on line 6, after "mold;", on a new line, --applying resin to the fiber lay up;-- has been inserted.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest:

(a) A process for making a fiber reinforced composite part against a base mold including,

providing a flexible body structure having an interfacing surface upon which at least one resin distribution channel and at least one vacuum distribution channel are formed and extend thereacross, and at least one perimeter seal;

placing a fiber lay up on a base mold;

applying resin to the fiber lay-up;

moving the body structure onto the base mold such that the fiber lay up is covered by the interfacing surface of the body structure, thereby forming an enclosed space holding the fiber lay up;

drawing a first vacuum at said perimeter seal to engage the cause the perimeter seal to sealingly engage the base mold;

drawing a second vacuum independent from the first vacuum through the enclosed space to thereby urge the resin to travel through the resin distribution channel and across and through the fiber lay up generally in the direction of the second vacuum to form the composite part upon curing.

(b) A mold component to be used with a base mold in a closed molding process including,

a flexible body structure having a perimeter region and an interfacing surface, and integrally formed therewith at least one resin distribution channel extending across the interfacing surface and at least one vacuum distribution channel;

a perimeter seal extending from said body structure to enclose the part between the base mold and the body structure and, defining at least a portion of the vacuum distribution channel; and

at least one vacuum output port in fluid communication with each of the vacuum distribution channel and the perimeter seal vacuum portion such as to provide a first vacuum along said seal to assist sealing engagement and respectively, an independent second vacuum across said interfacing surface to assist resin distribution between the body structure and the base mold.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
